

Fluid Inclusion Stratigraphy (FIS) Calibration Dataset

Product

A collation of public domain Fluid Inclusion Stratigraphy (FIS) reports and data to help calibrate newly acquired FIS data. Includes data from oil and gas discoveries as well as dry holes and traps that have been breached after initially being hydrocarbon charged

Deliverables

Compilation of Reports

Access to original FIS analysis reports for 380 wells across the APAC region

Digital Data for 180 Wells

Raw data files available in .las format to allow easy integration and manipulation

Repeat Analyses

Wells where FIS Analysis on the same well has been repeated for different clients to allow reproducibility to be assessed

Different Charge Histories

FIS data from wells with current oil or gas accumulations, breached traps and dry holes with and without conventional shows

Expert Support

Access to fluid inclusion experts to assist with data interpretation and integration

Option to Join JIP

Project Veritas is a joint industry project to evaluate controls on FIS response to develop enhanced interpretation protocols

Available for Immediate Delivery
